Profile

Backend Engineer with 4+ years of experience building reliable, scalable APIs and data-intensive systems.

Strong focus on clean architecture, observability, and collaboration with product and platform teams.

Comfortable working in fast-growing product environments with high quality and availability standards.

Professional Experience

Backend Engineer — HealthTech SaaS Company

Paris · 2022 – Present

- Designed and maintained REST and event-driven APIs serving thousands of daily users
- Built internal services for user management, billing, and integrations with third-party providers
- Improved system reliability by introducing structured logging, monitoring, and alerting
- Collaborated closely with product managers to translate business needs into technical solutions
- Participated in on-call rotation and incident resolution processes

Tech stack:

Node.js, TypeScript, PostgreSQL, REST APIs, message queues, Docker, CI/CD

Software Engineer — Digital Services Company

Lyon · 2020 – 2022

- Developed backend features for B2B web applications
- Worked on data models, migrations, and performance optimization
- Contributed to API documentation and internal developer tooling
- Took part in code reviews and continuous improvement of coding standards

Tech stack:

JavaScript, Node.js, SQL, Git, cloud-based deployments

Education

Master's Degree in Computer Science

Université de Montpellier

2018 – 2020
